Notice: Final Year B.Tech Project ? Synopsis Submission Guidelines

All B.Tech CSE-AIML final year students working in project teams of two or three members are required to submit a project synopsis before the announced deadline. The synopsis must clearly state the problem being addressed, the proposed methodology, the technology stack, and the expected outcomes of the project. Teams should also include a short literature review summarising at least five related systems or research papers, along with a brief explanation of how the proposed project differs from or improves upon existing work.

The synopsis document should not exceed three pages, excluding the cover page and references. It must be submitted as a single PDF file through the department portal, with the team number and all member names clearly printed on the cover page. Only one submission per team is required; submitting multiple copies or asking a teammate to submit separately will cause confusion during evaluation and should be avoided.

Every team will be allotted a faculty guide who will review the synopsis and provide feedback before the presentation date. Teams are encouraged to meet their allotted guide at least once before submission to confirm that the scope of the project is realistic for the available timeline. Guide allocation will be published on the department noticeboard and the student portal separately from this notice.

Key Dates and Evaluation Structure

The submission deadline for the project synopsis is 21st August. Synopses received after this date will only be accepted with a written extension request approved by the head of department, and late submissions may be penalised at the evaluator's discretion. Teams are strongly advised not to wait until the final day, since the portal has historically experienced heavy load in the last few hours before a deadline.

The mid-term evaluation will weight three components: the working prototype demonstrated on the day of evaluation will carry forty percent of the total marks, the written project report will carry thirty-five percent, and the individual viva voce conducted with each team member will carry the remaining twenty-five percent. Every team member must be present for the viva; a member who is absent without prior approval from the department will receive a zero for that component regardless of the team's overall performance.

Formatting requirements for the written report follow the standard institute template, which is available for download from the student portal under the final year project section. Reports that do not follow the prescribed template, including font size, margins, and heading styles, will be returned for correction before evaluation, which may affect the submission timeline for that team.

All submitted work must be original. Any section of the report or presentation found to be copied from another team, a previous year's submission, or an online source without proper citation will be treated as a case of academic dishonesty and referred to the disciplinary committee, independent of how small the copied portion is. Teams are encouraged to run their own plagiarism check before submission using the tool recommended by the department.

Students with questions about any part of this notice should first consult their allotted faculty guide. If the guide is unavailable or the question concerns scheduling rather than technical content, students may contact the final year project coordinator through the department office during working hours, Monday through Friday.

Teams that need to modify their submitted synopsis after the deadline because of a genuine change in project scope must first inform their allotted faculty guide in writing, explaining the reason for the change, before requesting permission from the project coordinator to upload one revised document through the same portal.
